Experience

Stridely Solutions — Ahmedabad, India
Software Engineer — *May 2025 – June 2026*

- Architected and shipped InstaBuild360, an AI-powered 3D metal building configurator featuring a LangChain ReAct agent system integrated with a FastAPI backend for real-time structural calculations.
- Built a WebSocket-based voice interaction pipeline (Lia) using OpenAI Whisper STT, TTS-1, and VAD silence detection with pre-generated startup audio caching and progressive status message streaming.
- Implemented multi-layer caching (Redis + lru_cache) and asyncio.gather parallelization, reducing average agent response latency by eliminating sequential LLM call bottlenecks.
- Designed a deterministic structural calculation engine using an LLM-for-classification and Python-for-math pattern to ensure verifiable and auditable outputs for engineering use cases.
- Implemented multi-tenant JWT authentication with Redis-backed session management and managed Azure cloud deployments (API Management, App Service).
- Developed the Angular 17 frontend with AI chat overlays and mobile-responsive patterns integrated with WebSocket voice agents.

Radixweb — Ahmedabad, India
Trainee Software Engineer — *Sept. 2024 – March 2025*

- Developed scalable web applications using .NET Core, Angular, and MS SQL Server, optimizing REST APIs for high-throughput product delivery.

Education

LDRP Institute of Technology & Research — Gandhinagar, India
Bachelor of Engineering in Information Technology (CGPA: 7.76 / 10.0) — *Oct. 2021 – April 2025*

Projects

Performance Management System | *.NET Core, Angular, SQL Server, SignalR* — Jan. 2025 – March 2025

- Full-stack appraisal platform with RBAC and real-time SignalR notifications, enabling managers to define KPIs and generate automated evaluation reports.

YouTube SageBot | *Python, GPT-2, NLTK, Streamlit, Google Gen AI* — June 2024 – Aug. 2024

- NLP system that extracts transcripts from YouTube videos and answers user questions using GPT-2 and contextual retrieval for researchers and educators.

Automated Attendance System | *Django, Face++ API, HTML/CSS, JavaScript* — Jan. 2024 – April 2024

- Facial recognition attendance platform achieving 98% accuracy using Face++ API for real-time identity verification and proxy prevention.

Technical Skills

Languages: C++, Python, C#, JavaScript, TypeScript
Frameworks: FastAPI, LangChain, .NET Core, Angular, Django, Streamlit
AI / ML: LLM Agents, RAG Pipelines, ReAct, OpenAI API, GPT-2, Whisper STT/TTS
Databases: Redis, MS SQL Server, SQL
Tools & Platforms: Git, Microsoft Azure, Linux, VS Code, Azure API Management
Concepts: OOP, REST APIs, WebSockets, Microservices, JWT, Multi-Tenancy, DSA, System Design

Certifications

- Python for Data Science – NPTEL (October 2023)
- Git for Beginners – Udemy (August 2023)
- AWS Cloud Practitioner Essentials – Coursera (June 2023)
